

Ultra Low Sulfur Diesel Fuel can help counties to comply with federal regulations

ULTRA LOW SULFUR DIESEL

Ultra Low Sulfur Diesel (ULSD) is a new technology that reduces the health risks associated with traditional diesel fuels. ULSD can aid counties to reach federal attainment regulations. Cities such as Cleveland and Ann Arbor, MI are using this technology and the results are clear.

BENEFITS OF ULTRA LOW SULFUR DIESEL FUELS

- When used with emission control equipment, there is a **90% reduction in particulate matter** and a **90% reduction in hydrocarbons**
- Harmful emissions linked to asthma attacks, cancer, and death will be reduced significantly
- Even used by itself, ULSD will reduce particulate matter by 10-15%

ULSD can be used in Ohio for:

- Public Transportation
- School Buses
- Construction
- Refuse Haulers
- Public Services
- Off Road
- Power Generators
- Agriculture Pumps and Equipment
- Heavy Duty Vehicles

MAKE OHIO A LEADER IN THE NATION:

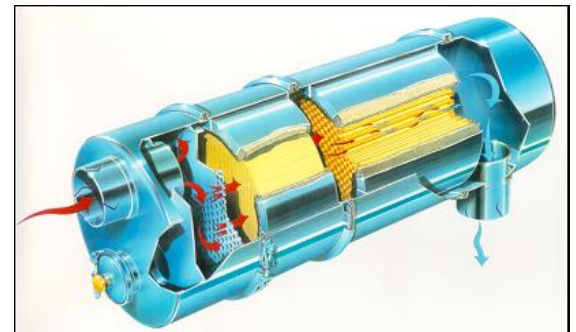

Encourage the use of Ultra Low Sulfur Diesel Fuels!

ULSD CAN REDUCE FINE PARTICLE POLLUTION BY 90%

(when used with other emission reduction equipment)

Ultra Low Sulfur Diesel Fuel is easy to use

- ULSD is available anywhere in Ohio for commercial vehicles
- Reliability and durability of diesel engines are not affected by using ULSD
- The cost is only 8 to 20 cents more per gallon and falling as ULSD becomes more widely available
- No special tank cleaning is required

Ultra Low Sulfur Diesel allows only 15 parts per million of pollution-causing sulfur, compared to 500 parts per million with regular diesel!
